3.0 V6 engines. [This book is] absolutely wonderful. It will be my new Bible... I have used it loads already in preparation for my ICT Mark 1 assessment. Taking on the role of ICT co-ordinator can be quite a daunting task but this step by step guide, breaking things down in manageable chunks will be very supportive. I love the blogging idea and the comments made by the characters are very realistic. This is just what new co-ordinators need, I wish I'd had this when I took over the coordination of ICT! - Christine Beedham, Primary ICT adviser, Warrington

Every primary school has the daunting task of embedding ICT and e-learning into their curriculum. This practical manual is the first part of a two volume set that together makes a detailed two year training programme for primary ICT and e-learning co-ordinators. The books combine key strategies and information with a weblog discussion from a group of 'virtual' co-ordinators who share their problems, fears and successes over the two-year programme, based on the author's wide experience of working with new co-ordinators and experienced staff on training programmes and in general support. Book 1 is designed specifically for co-ordinators new to the role who need starting points and background support. It presents a structured training programme split over three terms, guiding co-ordinators through the key stages of developing and implementing ICT policy and practice, including:

- o auditing existing school systems
- o reviewing and revising the school policy on ICT
- o reviewing the ways in which ICT is used as a teaching and learning tool across the curriculum
- o examining methods for the management of technical support services
- o establishing a clear overview of standards in ICT, including a review of assessment procedures, moderating work, monitoring teaching and learning and creating E Portfolios.

The books have a companion website, which will offer downloadable versions of the photocopiable sheets from the book, as well as links to other sources of help and advice. Contains 26 selected and thoroughly rewritten essays and articles (all written

by Janssen and published previously between 1976 and 2002 in yearbooks and periodicals) all dedicated to the history of printing and book production, this work draws systematically attention to typographical design of the book. The articles are mainly divided in two fields of attention: the analytical bibliography of the printed book (book production, studies of the technical aspects of type-setting and printing, type founding, printing presses, paper etc.) and the typographical design of books (its functions and its influence on how texts are read). The original AO/ASIF Instrumentation manual presented a concise and complete description of the AO instrumentation. Thoughtfully developed by Fridolin Sequin and Rigmor Texhammar, the manual discussed in a clear fashion the purpose and care of the various AO instruments that are handled by the operating room staff. One important feature of the first edition was a detailed checklist of the instruments required for the more common operating procedures for treating fractures. Fridolin Sequin was well-suited author the first edition: his 15 years of experience as a technical engineer for the AO gave him in-depth knowledge of AO instruments, and he drew on the clinical knowledge of Rigmor Texhammar, a consultant and director of the AO courses for nurses

Its original feature of combining a column of text with a column of illustrations meant the manual quickly became accepted as a standard. By 1981, translations could be found in English, French, Spanish, and Italian. Not surprisingly, the manual was very popular.

MARTHA is a set of general-purpose programs for analyzing linear electrical networks, available to users with access to APL time-sharing systems. The programs analyze, as a function of frequency, most linear "transmission-type" networks, with an input and an output. This includes most filters, amplifiers,

microwave networks, and feedback systems, even if such circuits are relatively complicated, with multiple feedback paths and branches. The programs cannot handle some complicated interconnections of components, and are not set up to analyze nonlinear or time varying networks. The topology of the network is described using "wiring operators." The elements available include lumped and distributed, active and passive, reciprocal and nonreciprocal elements. The possible output includes two-port parameters (impedance, admittance, hybrid, scattering, and ABCD matrices), as well as voltage gain, insertion gain, transducer gain, etc. These, their real and imaginary parts, or magnitude or phase, may be printed or plotted as functions of frequency or of each other. More than one network can be analyzed simultaneously. MARTHA is not inherently better at one frequency range than another, except perhaps in its repertoire of elements and response functions. MARTHA includes, besides R, L, and C, sixteen controlled sources; operational amplifiers; mutual inductance; three transistor models and the possibility of easily creating others; ideal transformers; several composite pi and tee structures; and a few exotic elements such as gyrators. For high-frequency applications MARTHA has several microwave elements, including TEM transmission lines, waveguides, attenuators, and isolators.

The New York Times Bestseller One of NPR's Best Books of the Year From one of the greatest newspaper editors of our time "a writing manual so smart and incisive that it could surely benefit anyone--journalist, student, business executive, legislator--who has ever tried to craft an English sentence and fallen short" (Daily Beast). Harry Evans has edited everything from the urgent files of battlefield reporters to the complex thought processes of Henry Kissinger. He's even been knighted for his services to journalism. In *DO I MAKE MYSELF CLEAR?*, he brings his indispensable insight to us all in his definite guide to writing well. The right words are oxygen to our ideas, but the digital era, with all of its TTYL, LMK,

and WTF, has been cutting off that oxygen flow. The compulsion to be precise has vanished from our culture, and in writing of every kind we see a trend towards more--more speed and more information but far less clarity. Evans provides practical examples of how editing and rewriting can make for better communication, even in the digital age. DO I MAKE MYSELF CLEAR? is an essential text, and one that will provide every writer an editor at his shoulder. In the UK between 1957 and 1964 Massey Ferguson manufactured some 380,000 MF35s, the most popular medium-sized farm tractors of the period. Many have remained in work and they are a restorer's favourite machine. Chris Jaworski's book, based on his heavily illustrated articles for Tractor & Machinery magazine, is a step-by-step manual on servicing and repairing these machines. Whereas the MF company manuals of the period were aimed at dealership mechanics and assumed a great amount of technical knowledge, Chris's book goes back to the basics. The range and quality of his photographs are also far higher than those of the originals from 50 years ago. The main headings of the book are: buying and safety; weekly checks; operator maintenance; engines; cooling systems; fuel systems; transmissions; rear axle and PTO; brakes; hydraulics; steering and front axle; electrics; bodywork. Each section is further sub-divided to take account of the modifications that were applied to the MF35 during its production run and the options available to owners including the De-Luxe variants. For owners involved in servicing, repairs or restoration this crystal-clear guide will help them enjoy getting the work done efficiently.
