In 2013, the International Conference on Advance Information Systems Engineering (CAiSE) turns 25. Initially launched in 1989, for all these years the conference has provided a broad forum for researchers working in the area of Information Systems Engineering. To reflect on the work done so far and to examine prospects for future work, the CAiSE Steering Committee decided to present a selection of seminal papers published for the conference during these years and to ask their authors, all prominent researchers in the field, to comment on their work and how it has developed over the years. The scope of the papers selected covers a broad range of topics related to modeling and designing information systems, collecting and managing requirements, and with special attention to how information systems are engineered towards their final development and deployment as software components. With this approach, the book provides not only a historical analysis on how information systems engineering evolved over the years, but also a fascinating social network analysis of the research community. Additionally, many inspiring ideas for future research and new perspectives in this area are sparked by the intriguing comments of the renowned authors. Nigeria's political economy has straddled the ideological divide between socialism and capitalism. The country produces oil, and at some point in its existence, it embarked on robust state involvement in the economy. This was marked by the acquisition, or establishment, of numerous state enterprises. Over the years, the performance of these enterprises was found to be dismal, and as part of the overall reform of the economy, Nigeria has joined the global trend toward reduction in direct state ownership of enterprises. Indeed, it has embarked on massive divestment of state interests in once publicly owned firms. Besides the universal rationale of efficiency, one of the objectives of the privatization exercise in Nigeria is the attraction and retention of foreign investments. This work examines the direct and indirect linkage between the government's divestiture of its interests in firms, on the one hand, and foreign investments in the country, on the other hand. The book is divided into seven chapters. Chapter 1 reviews the political and economic history of Nigeria, to set the background and context that necessitated the introduction of the reform package of which privatization is just an aspect. Chapter 2 is a discussion of various natures of state involvement in an economy. This ranges from mere regulation to active participation. The chapter discusses the competing conceptual and ideological theories and tries to situate the Nigerian experience within the broader conceptual dichotomies of capitalism, socialism and the via media of mixed economy. Chapter 3 is an examination of the meaning and rationales for privatization of state owned enterprises generally and the Nigerian attempts in particular. Nigeria's privatization program is an ongoing exercise. Yet two distinct attempts are identifiable: one which started in 1988 and the reinvigoration of the exercise, albeit with new constitutive frameworks, in 1999. Thus, Chapters 4 and 5 review the legal and institutional frameworks for these two exercises. Chapter 6 deals with foreign investments in Nigeria. The discussion encapsulates the pros and cons of foreign investments, especially in Nigeria. Chapter 7 explores the direct and indirect linkages between the privatization program in Nigeria and foreign investments in the country. This is particularly apposite because one of the touted objectives of the privatization exercise is the attraction of foreign investments. A conclusion follows.

The work finds that although foreign investments appear to have been indirectly boosted by the privatization exercise, foreign investors initially did not show interest in direct acquisition of the shares and other interests being relinquished by the government, but that that attitude has been changing gradually. Annotation This multi-volume series provides detailed histories of more than 7,000 of the most influential companies worldwide. The aims of these proceedings are to provide a complete coverage of the areas outlined, and to bring together researchers from academic and industry to share ideas, challenges, and solutions relating to the multifaceted aspects of this field. New multimedia standards (for example, MPEG-21) facilitate the seamless integration of multiple modalities into interoperable multimedia frameworks, transforming the way people work and interact with multimedia data. These key technologies and multimedia solutions interact and collaborate with each other in increasingly effective ways, contributing to the multimedia revolution and having a significant impact across a wide spectrum of consumer, business, healthcare, education, and governmental domains.

**Organizational Effectiveness: The Role of Psychology** examines psychological approaches in organizations, not from the more common perspective of their impact on individuals, but in relation to how the work of psychologists impacts on the overall effectiveness of the organization. It also provides a critical review of what psychology has to offer; the way psychologists choose the problems they address, work with others, and evaluate and demonstrate the impact they have. Robertson, Callinan and Bartram have brought together leading researchers and practitioners in work and organizational psychology. Each chapter provides a review of current knowledge, practice, issues and future directions in their own area of expertise, with a focus on contributions and implications for organizational functioning and the wider arena of managerial thinking. This book is for anyone interested in understanding the complex relations between individual, group and organisational performance and effectiveness. It is a valuable and challenging resource for advanced students and practitioners of occupational psychology, organizational behaviour, HRM, and psychological consultancy in organizations.

The diverse applications of IoT are achieved by a set of complex inter-related networks of things and communications. IoT applications are also concerned about an array of devices such as sensors, mobile devices, personal computers, the smart systems such as Alexa, Eco, etc, besides the whole range of communication network binding them together in a seamless manner. This book explores the variegated perspectives of security in the complex context of Internet of Things. It also aims to present the changing face of security, from the ubiquitous networks comprising of WSN as the lowest layer, to the enabler apps working as bridge between the users and the complex IoT system. It takes a closer look at the different types of security schemes required to fit in the heterogeneous nature of IoT network., whilst the readers are also introduced to basic attacks targeting an IoT network, as well as specific types of security schemes worked out by researchers across different countries. As Programmable Logic Controllers (PLC) play a fundamental role in Industrial Control Systems, since they provide various functionalities of physical tools by collecting data from input devices and sending commands to output devices, this book includes a discussion on the security considerations of extending a PLC-based system with IoT capabilities. Other advanced topics include: The machine ethics aspects in the IoT system; the Intrusion detection of WSN; and the methods of securing the user from privacy breaches due to the overprivileged IoT apps. This book will be beneficial to any readers interested in security of IoT systems and how to develop a layer-wise security scheme for such a system. **Safety at Work** is widely accepted as the most authoritative guide to safety and health in the workplace. This publication addresses the factors affecting the presence and growth of micro-organisms in piped networks as well as the practices of water supply organisations that can directly or indirectly influence them. The book shows that there are often public health reasons for adopting a more proactive approach to many of the traditional practices used in designing, operating and maintaining distribution networks, and to modifying the composition of the water that is fed into those networks. Safety at Work is widely accepted as the authoritative guide to safety and health in the workplace and covers all aspects of safety management. The sixth edition has been revised to cover recent changes to UK practice and standards in health, safety, employment and environmental legislation. It also incorporates EU directives and references to harmonised and international standards. Reflecting the importance of the roles of directors and managers in health and safety, new chapters cover the management of risk, emphasising the need for a sound organisational structure to achieve effective risk management. Developments in the behavioural approach to risk management and current thinking on the development of an international standard on safety management are also covered. Quality of the environment is rapidly becoming part of the safety manager's responsibilities both in the workplace and in the context of global pollution. A completely new part consisting of five chapters has been added dealing solely with environmental issues (including ISO 14001). The increasingly important role of ergonomics in health and safety is reflected in a new chapter on Applied Ergonomics, dealing with the subject pragmatically, that will allow the manager and practitioner to design process and operations that are within the limits of the human body. This state-of-the-art survey in the Advances in Petri Nets series reports how various well-established and novel Petri net notions and techniques can be employed for modelling communication-based systems, with a particular focus on workflow management and business processes. The book builds on the success of a special program of the German Science Foundation (DFG) on Petri Net Technology as well as on broad participation from the international Petri net research community. Single Crystal Growth of Semiconductors from Metallic Solutions covers the four principal growth techniques currently in use for the growth of semiconductor single crystals from metallic solutions. Providing an in-depth review of the state-of-the-art of each, both experimentally and by numerical simulations. The importance of a close interaction between the numerical and experimental aspects of the processes is also emphasized. Advances in the fields of electronics and opto-electronics are hampered by the limited number of substrate materials which can be readily produced by melt-growth techniques such as the Czochralski and Bridgman methods. This can be alleviated by the use of alternative growth techniques, and in particular, growth from metallic solutions. The principal techniques currently in use are: Liquid Phase Epitaxy; Liquid Phase Electroepitaxy; the Travelling Heater Method, and; Liquid Phase Diffusion. Single Crystal Growth of Semiconductors from Metallic Solutions will serve as a valuable reference tool for researchers, and graduate and senior undergraduate students in the field of crystal growth. It covers most of the models developed in recent years. The detailed development of basic and constitutive equations and the associated interface and boundary conditions given for each technique will be very valuable to researchers for the development of their new models.

\* Describes the fundamentals of crystal growth modelling \* Providing a state-of-the art description of the mathematical and experimental growth processes \* Allows reader to gain clear insight into the practical and mathematical aspects of the topic

Since the late 1980s, the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering. CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains – the Eiger, Mönch, and Jungfrau. The first two days consisted of pre-conference workshops and tutorials. The workshop themes included requirements engineering, evaluation of modeling methods, data integration over the Web, agent-oriented information systems, and the design and management of data warehouses. Continuing the tradition of recent CAiSE conferences, there was also a doctoral consortium. The pre-conference tutorials were on the themes of e-business models and XML application development. The main conference program included three invited speakers, two tutorials, and a panel discussion in addition to presentations of the papers in these proceedings. We also included a special ‘practice and experience’ session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice.

We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible. The program committee, whose members came from 20 different countries, selected 27 high-quality research papers and 3 experience reports from a total of 97 submissions. The topics of these papers span

the wide-range of topics relevant to information systems engineering – from requirements and design through to implementation and operation of complex and dynamic systems. The new edition takes account of the new Insolvency Rules 2009, the Companies Act 2006, Insolvency Act 2000, Enterprise Act 2003 and SIPs. New material includes- new chapters covering fees (remuneration), Scotland and an International chapter (including coverage of the UNCITRAL Model Law and EU Regulation on Bankruptcy Proceedings); inclusion of Professional Standards; e-communication; coverage of LLPs; coverage of small to medium CVAs and large companies CVAs. With stringent standards in place for conducting shareholders' and creditors' meetings this is a unique, comprehensive, practical manual that gathers together in one place the relevant regulations and current practice and procedures that need to be understood and followed by those conducting such meetings.
