To be accessible to the widest range of readers, the clinical application section introduces the disease process, existing therapies, followed by pharmacogenomics and stratified medicine details. Medicine is the cornerstone of modern therapeutics prescribed on the basis that its benefit should outweigh its risk. It is well known that people respond differently to medications and in many cases the risk-benefit ratio for a particular drug may be a gray area. The last decade has seen a revolution in genomics both in terms of technological innovation and discovering genetic markers associated with disease. Written for generalists and non-addiction specialists, this new edition emphasizes compassionate, non-stigmatizing, patient-focused care. Describes the chemical and physical properties of pharmaceutical excipients. Each monograph contains nonproprietary names, synonyms, chemical name and CAS registry number, empirical formula and molecular weight, structural formula, functional category, applications in pharmaceutical formulation or technology, description, pharmacopeial specifications, typical properties, stability and storage conditions, incompatibilities, method of manufacture, safety, handling precautions, regulatory status, pharmacopeias, related substances, comments, specific references, general references, and authors. Medical professionals are often involved in the management of the pregnant patient without necessarily being experts on all the complications surrounding pregnancy. The Handbook of Obstetric Medicine addresses the most common and serious medical conditions encountered in pregnancy, including heart disease, thromboembolism, diabetes, skin problems, gastrointestinal disease, neurological problems, hormonal diseases, hypertension and pre-eclampsia, and more. For each condition, the handbook includes a description of incidence, clinical features, pathogenesis, diagnosis, the effect of pregnancy, and management of the condition. The book also includes a detailed section focusing on the differential diagnosis of common symptoms including hypertension, chest pain, palpitations, breathlessness, headaches, dizziness, abdominal pain,**
