Psychology Education and Training Jan 22 2020 Much of the psychological research in the last century has been conducted in the global North West; hence, many prevailing theories and methodologies reflect the philosophical framework and shared cultural knowledge of this region. Other world views and cultural contexts have, as yet, not had the same opportunity to develop scientific insights that come to the attention of global audiences. Psychology Education and Training is the first truly international effort to generate a framework for common standards in psychological education and training across the globe. Psychologists have long studied human beings in their socio-cultural context. New challenges such as

globalisation and the relationship of the brain and behavior require that education and training keep pace with these rapidly evolving developments. The chapters in this book were generated by an international conference which resulted in the Dornburg Accord. While anchored in higher education, the focus is on the generative and translational psychological science needed to fulfill psychology's responsibility to society. Psychology Education and Training is the first book of its kind to cover both historic strengths and the requirements of emerging fields. The book deals with balancing the universalities and cultural specificities of psychological processes, the adjustments to academic curricula required to support national needs, as well as the credentials and regulations required to assure the quality of psychological services. Psychology Education and Training is unique in providing initial data and concurrent assessment of various components of education and training in psychology across the globe. The book is a must for faculty members, advanced students of psychology and policy-makers who are interested in the issues that shape their societies.

Psychological Jurisprudence Sep 22 2022 "Psychological jurisprudence - or the use of psychology in the legal realm - relies on theories and methods of criminal justice and mental health to make decisions about intervention, policy, and programming. While the intentions behind the law-psychology field are humane, the results often are not. This book provides a "radical" agenda for psychological jurisprudence, one that relies on the insights of literary criticism, psychoanalysis, feminist theory, political economy analysis, postmodernism, and related strains of critical thought. Contributors reveal the roots of psycholegal logic and demonstrate how citizen justice and structural reform are displaced by so-called science and facts. A number of complex issues in the law-psychology field are addressed, including forensic mental health decision-making, parricide, competency to stand trial, adolescent identity development, penal punitiveness, and offender rehabilitation. In exploring how the current resolution to these and related controversies fail to promote the dignity or empowerment of persons with mental illness, this book suggests how the law-psychology field can meaningfully contribute to advancing the goals of justice and humanism in psycholegal theory, research, and policy." --Book Jacket.

To effectively reinforce or question that testimony, certain specialized knowledge is essential. Scientifically accepted standards and theories are constantly evolving.

Keeping up with the data had been a challenge, but one integrated resource has made it simple. Aspen Publishers' Psychological Experts in Divorce Actions pulls all the research together into the definitive guide to understanding the role of psychological evaluations in divorce and custody actions. Focused on providing the best approach to protecting your client's interests, this work explains all the leading testing instruments, what conclusions may be drawn and how to challenge or support those conclusions. In addition to offering effective examination and cross-examination strategies, it assists you in handling the gamut of psychological factors that affect clients in divorce and custody cases. Authors Marc J. Ackerman, Ph.D., and Andrew W. Kane, Ph.D., are licensed psychologists who have been involved in hundreds of custody cases. Drawing on their extensive experience—testing parties to a divorce and treating psychological patients in the clinic—and as psychological experts in the courtroom, they identify the most important psychological evaluation research used in divorce and custody decision-making and distill the information into clear terms lawyers can readily apply. They also examine vital issues including: Ethics—confidentiality, privilege, duty to warn or protect (Tarasoff), sharing raw data, test integrity Sexual abuse—bona fide or fabricated allegations, psychological effects of sexual abuse, profiles of abuser and abused Testing—personality tests (including MMPI-2, And The new MMPI-2-RF, Rorschach, Millon, TAT); intelligence tests (Wechsler scales, Kaufman scales, Stanford Binet); custody tests (ASPECT, PCRI, PASS, BPS); and many more How divorce affects families—custody, placement, age and gender differences, grandparents, sexual preference, psychological problems

The Business of Neuropsychology Aug 09 2021 The purpose of this text is to provide an overview of basic business principles and how they can be used to enhance the stability and fiscal responsibility of neuropsychological practice. The principles discussed are defined and information is provided to guide practical application of the concepts. The book is designed to benefit professionals at varying levels of practice regardless of their work setting, but focuses primarily on the issues related to neuropsychological practice. Graduate school catalogs and training program brochures reveal a broad array of educational opportunities designed to prepare future professionals for independent practice in neuropsychology. However, little is offered to prepare neuropsychologists for the business realities that await them in the workplace. The expectation that they will simply see patients and do quality clinical work is often in conflict with institutional goals of making money so that the doors can remain open. The result can be a cataclysmic "crash" when altruistic ideals meet capitalistic needs. The concepts of "cash is king" and "no margin, no mission" are foreign to most neuropsychologists until our own fiscal bottom line is affected. The Business of Neuropsychology also contains an overview of business "basics," such as budget and fiscal tracking, strategies for communicating with stakeholders in the business, front and back office flow and processes, billing, coding, marketing, referral relationship development, and staff growth and development. The Business of Neuropsychology is part of the Oxford AACN Workshop series.

Occupational Devotion: Finding Satisfaction and Fulfillment at Work Jul 08 2021 The idea of occupational devotion, or devotee work, was conceptualized and incorporated in the serious leisure perspective as one of the two serious pursuits. The other pursuit is serious leisure itself, with both forms being anchored in activities that are immensely appealing and fulfilling. Despite such desirable qualities the serious pursuits constitute a minority of all work and leisure, these two domains being dominated by disagreeable work and hedonic casual leisure activities. The devotee occupations serve as full-time or part-time livelihoods for people fortunate enough to have found them. Such work has so far been observed to exist in four sectors of the economy: the liberal professions, consulting occupations, craft-like trades, and creativity-based small businesses. In ways set out in this book, devotee work roots in serious leisure, even while many participants in the latter have no desire to pursue the former.
