Women's Health 2e Sep 01 2020 Though we may no longer confine our understanding of women's health to reproduction and maternity care, women's health in Canada continues to be limited by knowledge gaps, political agendas, and fiscal restraints. This second edition of *Women's Health* provides a comprehensive picture of the state of women's health in Canada, tracing the emergence of the field and outlining some of the current challenges facing its advancement. The contributors--who include academics, health care professionals, and policy-makers--explore women's health in different social and geographical locations, the gendering of care work, and the ways in which research can influence health policy. Drawing on gender-based analysis and highlighting the diversity among women, this multidisciplinary collection illustrates the breadth of contemporary Canadian writing on women's health and calls for a renewed commitment to women's health advocacy. This revised edition has been thoroughly updated to reflect developments in research and recent changes in the social, political, and economic context. New chapters cover topics such as wait times, girls' health, and unpaid health care. Featuring questions for further thought and lists of recommended readings and websites, this unique text is a valuable resource for both students and researchers in the fields of women's studies, sociology, health sciences, and nursing.

*Evolution* Jan 05 2021 All of Sewall Wright's published papers on evolution up to 1950, and a few published later, are gathered in this volume. William Provine's introductions to each paper include pertinent references to related portions of Provine's Sewall Wright and Evolutionary Biology and Wright's four-volume masterwork, *Evolution and the Genetics of Populations*. By comparing the papers in this volume with the corresponding topics in the larger work, it is possible to determine the respects in which Wright extended, changed, or remained constant in his ideas over a period of sixty years. Wright's shifting-balance theory of evolution, first conceived in 1925, has proved enormously useful in modern evolutionary biology. Wright's international prestige has never been higher than it is currently, and the time is ripe for a rereading of his seminal papers. These papers are not only historically important for understanding the period of the "evolutionary synthesis" of the 1930s and 1940s, but continue to be stimulating and useful to working evolutionary biologists today.

*Familial Cancer and Prevention* Jan 25 2020 A New Strategy Toward Cancer Control. Still in its infancy, the familial/hereditary approach to cancer control is proving to be one of the most potent strategies in the war on cancer. Over the past few years the human genome project has generated an abundance of valuable information on the genetic origins of a range of cancers. Tests now exist for several hereditary, tumor-promoting genetic mutations-including those found in BRCA genes

associated with breast cancer as well as mutations of HNPCC genes which have been linked to colon cancers-and many more are anticipated in the near future. Armed with the information yielded by these tests, physicians have already saved countless lives through preventative counseling, early detection, and more highly-focused intervention strategies. Inspired by the proceedings of the UICC 1997 Symposium on Familial Cancer and Prevention held in Kobe, Japan, this volume provides clinicians and researchers with a detailed review of the latest developments at the front lines of the familial cancer prevention movement. In a series of edited contributions, leading researchers and clinicians from around the globe summarize their experiences and analyze current and emerging trends in: \* Information gathering and history taking. \* Risk assessment. \* Genetic testing for colorectal, endocrine, breast, and other familial cancers. \* Diagnosis, prognosis, and management of an array of familial cancers. \* Genetic counseling for familial cancers. Up-to-date, authoritative, and comprehensive, Familial Cancer and Prevention is an important working resource for clinicians, cancer researchers, and epidemiologists.
