Finally, this book provides a balanced treatment of how visual and media literacies support deep content learning, student engagement, critical thinking, creativity, problem solving, and production.

Handbook of the Sociology of Gender Jun 14 2022 During the past three decades, feminist scholars have successfully demonstrated the ubiquity and omnirelevance of gender as a sociocultural construction in virtually all human collectivities, past and present. Intrapsychic, interactional, and collective social processes are gendered, as are micro, meso, and macro social structures. Gender shapes, and is shaped, in all arenas of social life, from the most mundane practices of everyday life to those of the most powerful corporate actors. Contemporary understandings of gender emanate from a large community of primarily feminist scholars that spans the gamut of learned disciplines and also includes non-academic activist thinkers. However, while incorporating some cross-disciplinary material, this volume focuses specifically on sociological theories and research concerning gender, which are discussed across the full array of social processes, structures, and institutions. As editor, I have explicitly tried to shape the contributions to this volume along several lines that reflect my long-standing views about sociology in general, and gender sociology in particular. First, I asked authors to

include cross-national and historical material as much as possible. This request reflects my belief that understanding and evaluating the here-and-now and working realistically for a better future can only be accomplished from a comparative perspective. Too often, American sociology has been both tempero- and ethnocentric. Second, I have asked authors to be sensitive to within-gender differences along class, racial/ethnic, sexual preference, and age cohort lines.

Modern Diagnostic X-Ray Sources Sep 17 2022 Now fully updated, the second edition of *Modern Diagnostic X-Ray Sources: Technology, Manufacturing, Reliability* gives an up-to-date summary of X-ray source technology and design for applications in modern diagnostic medical imaging. It lays a sound groundwork for education and advanced training in the physics of X-ray production, X-ray interactions with matter, and imaging modalities and assesses their prospects. The book begins with a comprehensive and easy-to-read historical overview of X-ray tube and generator development, including key achievements leading up to the current technological and economic state of the field. The book covers the physics of X-ray generation, including the process of constructing X-ray source devices. The stand-alone chapters can be read in order or in selections. They take you inside diagnostic X-ray tubes, illustrating their design, functions, metrics for validation, and interfaces. The detailed descriptions enable objective comparison and benchmarking. This detailed presentation of X-ray tube creation and functions enables you to understand how to optimize tube efficiency, particularly with consideration for economics and environmental care. It also simplifies faultfinding. Along with covering the past and current state of the field, the book assesses the future regarding developing new X-ray sources that can enhance performance and yield greater benefits to the scientific community and to the public. After heading international R&D, marketing and advanced development for X-ray sources with Philips, and working in the X-ray industry for more than four decades, Rolf Behling retired in 2020 and is now the owner of the consulting firm XtraininX, Germany. He holds numerous patents and is continuously publishing, consulting and training.

Traumatic Injury Research at NIOSH Apr 19 2020 The occurrences of both injury and death that take place on the job are a significant public health problem in the United States, causing a substantial human and economic burden. Traumatic Injury Research at NIOSH is the sixth report in the series *Reviews of Research Programs of the National Institute for Occupational Safety and Health*. The Committee to Evaluate the NIOSH Traumatic Injury Research Program found the program's research during 1996-2005 (the evaluation period for this review) relevant to reducing the burden of traumatic injury in the workplace and to have contributed to improvements in worker health and safety. To continue to reduce injuries and deaths to workers due to trauma, the committee recommended that the TI Research Program continue setting goals within the program's scope and resources; work with other federal agencies that support injury prevention and control research to outline areas of collaboration; embark on a program to increase the visibility of traumatic injury research; develop a strategic plan for evaluating its research-to-practice efforts and for building the capacity to carry out these efforts; and consider research on the safety impacts of changes in the nature of work as well as intervention research targeting organization policies and practices.

Chance, Calculation and Life Jul 23 2020 Chance, Calculation and Life brings together 16 original papers from the colloquium of the same name, organized by the International Cultural Center of Cerisy in 2019. From mathematics to the humanities and biology, there are many concepts and questions related to chance. What are the different types of chance? Does chance correspond to a lack of knowledge about the causes of events, or is there a truly intrinsic and irreducible chance? Does chance preside over our decisions? Does it govern evolution? Is it at the origin of life? What part do chance and necessity play in biology? This book answers these fundamental questions by bringing together the clear and richly documented contributions of mathematicians, physicists, biologists and philosophers who make this book an incomparable tool for work and reflection.

Distributed Leadership in Practice Dec 16 2019 Distributed leadership has become an important term for educational policymakers, practitioners, and researchers in the United States and around the world, but there is much diversity in how the term is understood. Some use it as a synonym for democratic or participative leadership. This book examines what it means to take a distributed perspective based on extensive research and a rich theoretical perspective developed by experts in the field. Including numerous case studies of individual schools and providing empirically based accounts of school settings using a distributed

perspective, this thorough volume: Explores how a distributed perspective is different from other frameworks for thinking about leadership. Provides clear examples of how taking a distributed perspective can help researchers understand and connect more directly to leadership practice. Illustrates how the day-to-day practice of leadership is an important line of inquiry for scholars and for those interested in improving school leadership.

Mexican Philosophy in the 20th Century Jun 21 2020 Sánchez and Sanchez have selected, edited, translated, and introduced some of the most influential texts in Mexican philosophy, which constitute a unique and robust tradition that will challenge and complicate traditional conceptions of philosophy. The texts collected here are organized chronologically and represent a period of Mexican thought and culture that emerged from the Mexican Revolution of 1910 and which culminated in la filosofía de lo mexicano (the philosophy of Mexicanness). Though the selections reflect on a variety of philosophical questions, collectively they represent a growing tendency to take seriously the question of Mexican national identity as a philosophical question--especially given the complexities of Mexico's indigenous and European ancestries, a history of colonialism, and a growing dependency on foreign money and culture. More than an attempt to describe the national character, however, the texts gathered here represent an optimistic period in Mexican philosophy that aimed to affirm Mexican culture and philosophy as a valuable, if not urgent, contribution to universal culture.

Building the Case for Health Literacy May 13 2022 The field of health literacy has evolved from one focused on individuals to one that recognizes that health literacy is multidimensional. While communicating in a health literate manner is important for everyone, it is particularly important when communicating with those with limited health literacy who also experience more serious medication errors, higher rates of hospitalization and use of the emergency room, poor health outcomes, and increased mortality. Over the past decade, research has shown that health literacy interventions can significantly impact various areas including health care costs, outcomes, and health disparities. To understand the extent to which health literacy has been shown to be effective at contributing to the Quadruple Aim of improving the health of communities, providing better care, providing affordable care, and improving the experience of the health care team, the National Academies of Sciences, Engineering, and Medicine convened a public workshop on building the case for health literacy. This publication summarizes the presentations and discussions from the workshop, and highlights important lessons about the role of health literacy in meeting the Quadruple Aim, case studies of organizations that have adopted health literacy, and discussions among the different stakeholders involved in making the case for health literacy.

Increasing Student Success in Developmental Mathematics Jun 02 2021 The Board on Science Education and the Board on Mathematical Sciences and Analytics of the National Academies of Sciences, Engineering, and Medicine convened the Workshop on Increasing Student Success in Developmental Mathematics on March 18-19, 2019. The Workshop explored how to best support all students in postsecondary mathematics, with particular attention to students who are unsuccessful in developmental mathematics and with an eye toward issues of access to promising reforms and equitable learning environments. The two-day workshop was designed to bring together a variety of stakeholders, including experts who have developed and/or implemented new initiatives to improve the mathematics education experience for students. The overarching goal of the workshop was to take stock of the mathematics education community's progress in this domain. Participants examined the data on students who are well-served by new reform structures in developmental mathematics and

discussed various cohorts of students who are not currently well served - those who even with access to reforms do not succeed and those who do not have access to a reform due to differential access constraints. Throughout the workshop, participants also explored promising approaches to bolstering student outcomes in mathematics, focusing especially on research and data that demonstrate the success of these approaches; deliberated and discussed barriers and opportunities for effectively serving all students; and outlined some key directions of inquiry intended to address the prevailing research and data needs in the field. This publication summarizes the presentations and discussion of the workshop.

An Integrative Model of Moral Deliberation Feb 27 2021 An Integrative Model of Moral Deliberation maintains that current models of moral deliberation do not effectively deal with contemporary moral complexity because they are based on an inadequate theory of moral cognition. Drawing on research in neuroscience, evolutionary psychology, social theory, and dual process cognitive theory and on the work of William James, this book develops a theory of moral cognition which provides a major role for aesthetic sensibilities and upon this theory develops a robust model of moral deliberation. This model portrays moral deliberation as a back and forth movement between intuitive and analytic cognitions, which constructs narrative scenarios and then assesses and revises them according to aesthetic sensibilities.

Top Student, Top School? Jan 17 2020 Most of us think that valedictorians can write their own ticket. By reaching the top of their class they have proven their merit, so their next logical step should be to attend the nation's very best universities. Yet in *Top Student, Top School?*, Alexandria Walton Radford, of American Institutes for Research, reveals that many valedictorians do not enroll in prestigious institutions. Employing an original five-state study that surveyed nine hundred public high school valedictorians, she sets out to determine when and why valedictorians end up at less selective schools, showing that social class makes all the difference. Radford traces valedictorians' paths to college and presents damning evidence that high schools do not provide sufficient guidance on crucial factors affecting college selection, such as reputation, financial aid, and even the application process itself. Left in a bewildering environment of seemingly similar options, many students depend on their parents for assistance—and this allows social class to rear its head and have a profound impact on where students attend. Simply put, parents from less affluent backgrounds are far less

informed about differences in colleges' quality, the college application process, and financial aid options, which significantly limits their child's chances of attending a competitive school, even when their child has already managed to become valedictorian. *Top Student, Top School?* pinpoints an overlooked yet critical juncture in the education process, one that stands as a barrier to class mobility. By focusing solely on valedictorians, it shows that students' paths diverge by social class even when they are similarly well-prepared academically, and this divergence is traceable to specific failures by society, failures that we can and should address. Lost Crops of Africa Oct 26 2020 This report is the second in a series of three evaluating underexploited African plant resources that could help broaden and secure Africa's food supply. The volume describes the characteristics of 18 little-known indigenous African vegetables (including tubers and legumes) that have potential as food- and cash-crops but are typically overlooked by scientists and policymakers and in the world at large. The book assesses the potential of each vegetable to help overcome malnutrition, boost food security, foster rural development, and create sustainable landcare in Africa. Each species is described in a separate chapter, based on information gathered from and verified by a pool of experts throughout the world. Volume I describes African grains and Volume III African fruits.

The Oxford Handbook of Food, Water and Society Jul 03 2021 Society's greatest use of water is in food production; a fact that puts farmers centre stage in global environmental management. Current management of food value chains, however, is not well set up to enable farmers to undertake their dual role of feeding a growing population and stewarding natural resources. The book considers the interconnected issues of real water in the environment and "virtual water" in food value chains and investigates how society influences both fields. This

perspective draws out considerable challenges for food security and for environmental stewardship in the context of ongoing global change. The book discusses these issues by region and with global overviews of selected commodities. Innovation relevant to the kind of change needed for the current food system to meet future challenges is reviewed in light of the findings of the regional and thematic analysis.

Freestanding Birth Centers Aug 24 2020 Written for graduate students and professionals in the fields of midwifery, women's health, and public health, this book explores the freestanding birth center model in the United States from its conception by pioneering midwives and others in the early 1970s to the present day. Encyclopedia of the Anthropocene Dec 08 2021 Encyclopedia of the Anthropocene presents a currency-based, global synthesis cataloguing the impact of humanity's global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological, Energy and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings and ideas within the Anthropocene concept. Questions widely debated among scientists, humanists, conservationists, politicians and others are included, providing discussion on when the Anthropocene began, what to call it, whether it should be considered an official geological epoch, whether it can be contained in time, and how it will affect future generations. Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century, the term 'Anthropocene' was only first used by ecologist Eugene Stoermer in the 1980s, and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000. Presents comprehensive and systematic coverage of topics related to the Anthropocene, with a focus on the Geosciences and Environmental science Includes point-counterpoint articles debating key aspects of the Anthropocene, giving users an even-handed navigation of this complex area Provides historic, seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time

Ancient Greece and Rome in Videogames Feb 16 2020 This volume presents an original

framework for the study of video games that use visual materials and narrative conventions from ancient Greece and Rome. It focuses on the culturally rich continuum of ancient Greek and Roman games, treating them not just as representations, but as functional interactive products that require the player to interpret, communicate with and alter them. Tracking the movement of such concepts across different media, the study builds an interconnected picture of antiquity in video games within a wider transmedial environment. *Ancient Greece and Rome in Videogames* presents a wide array of games from several different genres, ranging from the blood-spilling violence of god-killing and gladiatorial combat to meticulous strategizing over virtual Roman Empires and often bizarre adventures in pseudo-ancient places. Readers encounter instances in which players become intimately engaged with the “epic mode” of spectacle in *God of War*, moments of negotiation with colonised lands in *Rome: Total War* and *Imperium Romanum*, and multi-layered narratives rich with ancient traditions in games such as *Eleusis* and *Salamambo*. The case study approach draws on close analysis of outstanding examples of the genre to uncover how both representation and gameplay function in such “ancient games”.

Ethics in Psychology and the Mental Health Professions Mar 31 2021 Most mental health professionals and behavioral scientists enter the field with a strong desire to help others, but clinical practice and research endeavors often involve decision-making in the context of ethical ambiguity. Good intentions are important, but unfortunately, they do not always protect the practitioner and client from breaches in ethical conduct. Academics, researchers, and students also face a range of ethical challenges from the classroom to the laboratory. Now in a new expanded edition, *Ethics in Psychology and the Mental Health Professions*, the most widely read and cited ethics textbook in psychology, has emerged with a broadened scope extending across the mental health and behavioral science fields. The revised volume considers many of the ethical questions and dilemmas that mental health professionals encounter in their everyday practice, research, and teaching. The book has been completely updated and is now also relevant for counselors, marriage and family therapists, social workers, and psychiatrists, and includes the ethics codes of those groups as appendices. Providing both a critical assessment and elucidation of key topics in the APA's guidelines, this comprehensive volume takes a practical approach to ethics and offers constructive means for both preventing problems, recognizing, approaching, and resolving ethical predicaments. Written in a highly readable and accessible style, this new edition retains the key features which have contributed to its popularity, including hundreds of case studies that provide illustrative guidance on a wide variety of topics, including fee setting, advertising for clients, research ethics, sexual attraction, how to confront observed unethical conduct in others, and confidentiality, among others. *Ethics in Psychology and the Mental Health Professions* will be important reading for practitioners and students-in training. Advancing the Science of Cancer in Latinos Jan 09 2022 This open access book gives an overview of the sessions, panel discussions, and outcomes of the Advancing the Science of Cancer in Latinos conference, held in February 2018 in San Antonio, Texas, USA, and hosted by the Mays Cancer Center and the Institute for Health Promotion Research at UT Health San Antonio. Latinos – the largest, youngest, and fastest-growing minority group in the United States – are expected to face a 142% rise in cancer cases in coming years. Although there has been substantial advancement in cancer prevention, screening, diagnosis, and treatment over the past few decades, addressing Latino cancer health disparities has not nearly kept pace with progress. The diverse and dynamic group of speakers and panelists brought together at the Advancing the Science of Cancer in Latinos conference provided in-depth insights as well as progress and actionable goals for Latino-focused basic science research, clinical best practices, community interventions, and what can be done by way of prevention, screening, diagnosis, and treatment of cancer in Latinos. These insights have been translated into the chapters included in this compendium; the chapters summarize the presentations and include current knowledge in the specific topic areas, identified gaps, and top priority areas for future cancer research in Latinos. Topics included among the chapters: Colorectal cancer disparities in Latinos: Genes vs. Environment Breast cancer risk and mortality in women of Latin American origin Differential cancer risk in Latinos: The role of diet Overcoming barriers for Latinos on cancer clinical trials Es tiempo: Engaging Latinas in cervical cancer research Emerging policies in U.S. health care Advancing the Science of Cancer in Latinos proves to be an indispensable resource offering key insights into actionable targets for basic science research, suggestions for clinical best practices and community interventions, and novel strategies and advocacy opportunities to reduce health disparities in Latino communities. It will find an engaged audience among researchers, academics, physicians and other healthcare professionals, patient advocates, students, and others with an interest in the broad field of Latino cancer.

The Suspension of Seriousness Nov 26 2020 The Suspension of Seriousness engages the Mexican philosopher Jorge Portilla (1919–1963), taking note of Portilla's philosophical methodology, insights, and contributions to our understanding of value, being, and subjectivity. Portilla lived a short, troubled life and never held a teaching appointment, but his works, though few in number, were nevertheless philosophically penetrating. He is a legendary character in the Mexican popular imagination of the 1940s and '50s, but little has been written about him or his philosophy. His posthumously published *Fenomenología del relajo* is a phenomenological analysis of what Portilla calls "relajo" or the state we assume when we do not want to do what is seriously being asked of us—what is demanded of us. It is, Portilla says, "the suspension of seriousness." Carlos Alberto Sánchez uses Portilla's *Fenomenología del relajo* as a point of departure to consider the dangers both of our uncritical adherence to values as well as our urge to reject values altogether. He argues that Portilla provides a framework in which to situate the modern condition, ourselves, and our future. The first authorized English translation of Portilla's *Fenomenología del relajo* is included.
