Dedicated to the preservation of all forms of off-road recreation in an environmentally responsible manner. This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using E10 gasoline (10% ethanol mixed with pump gasoline). Performance technologies that are presented include:

- Engine Design: application of the four-stroke engine
- Applications to address both engine and track noise
- Exhaust After-treatment to reduce emissions

The SAE International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors' modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.

Maine game warden Mike Bowditch finds himself in a life-or-death chase in this next thriller in the bestselling series by Edgar Award nominee Paul Doiron, *Dead by Dawn*. Mike Bowditch is fighting for his life. After being ambushed on a dark winter road, Bowditch crashes his Jeep into a frozen river. Trapped beneath the ice in the middle of nowhere, having lost his gun and any way to signal for help, Mike fights his way to the surface. But surviving the crash is only the first challenge. Whoever set the trap that ran him off the road is still out there, and they're coming for him. Hours earlier, Mike had been called to investigate the suspicious drowning of a wealthy professor. Despite the death being ruled an accident, the victim's elegant, eccentric daughter-in-law insists the man was murdered. She suspects his companion that day, a reclusive survivalist and conspiracy theorist who accompanied the professor on his fateful duck-hunting trip—but what exactly was the nature of their relationship? And was her own sharp-tongued daughter, who inherited the dead man's fortune, as close to her grandfather as she claims? The accusations lead Mike to a sinister local family who claim to have information on the crime. But when his Jeep flies into the river and unknown armed assailants on snowmobiles chase him through the wilderness, the investigation turns into a fight for survival. As Mike faces a nightlong battle to stay alive, he must dissect the hours leading up to the ambush and solve two riddles: which one of these people desperately want him dead, and what has he done to incur their wrath? In the good old Minnesota town of Fergus Falls, murder is about as common as shorts-wearing tourists in January. But even in quiet Nordic towns, strange things can happen in the dead of winter. Eager to retire, insurance company owner "Pinky" Hofstead had grand plans to announce the appointment of his new president at an all-employee winter weekend retreat. But after a night of snowmobiling in sub-zero weather, Hofstead is found the next day—as cold and stiff as a piece of dried lutefisk. Puzzled by how Hofstead's body could be lying beneath a concrete loon with his snowmobile abandoned fifty feet away, Otter County Sheriff Palmer Knutson and his upstart rookie detective suspect that this is more than just an accident. With possible motives of greed, ambition, and jealousy, could any of the four employees or their spouses be cold-blooded enough to ice the boss? Uffda! There's a murderous chill in the air! This book addresses the point of intersection between cognition, metacognition, and culture in learning and teaching Science, Technology, Engineering, and Mathematics (STEM). We explore theoretical background and cutting-edge research about how various forms of cognitive and metacognitive instruction may enhance learning and thinking in STEM classrooms from K-12 to university and in different cultures and countries. Over the past several years, STEM education research has witnessed rapid growth, attracting considerable interest among scholars and educators. The book provides an updated collection of studies about cognition, metacognition and culture in the four STEM domains. The field of research, cognition and metacognition in STEM education still suffers from ambiguity in meanings of key concepts that various researchers use. This book is organized according to a unique manner: Each chapter

features one of the four STEM domains and one of the three themes—cognition, metacognition, and culture—and defines key concepts. This matrix-type organization opens a new path to knowledge in STEM education and facilitates its understanding. The discussion at the end of the book integrates these definitions for analyzing and mapping the STEM education research. Niente di buono può nascere dai sogni. Ogni inuit lo sa. Tutto ci è che il capitano della polizia di Copenaghen Qaanaaq Adriensen sa della Groenlandia è di esserci nato. Adottato a soli tre anni, è cresciuto in Danimarca, perciò adesso, nel volo verso Nuuk, la capitale più a nord del mondo, dove è chiamato a indagare su tre omicidi, prova una certa malinconia al pensiero di mettere piede su quella enorme macchia lattea che si vede dai finestrini. Ad aspettarlo, al suo arrivo, la polizia locale, capitanata dalla bionda e gelida Rikke Engell, insieme all'ispettore inuit Apputiku Kalakek. Qualcosa nell'accoglienza dei poliziotti lo mette in guardia: anche se è nato lì, il capitano Adriensen non è gradito. Tre operai della Green Oil, la compagnia petrolifera che opera in quella regione, sono stati trovati morti, appena riconoscibili per le orrende ferite che sono state inferte loro, e che fanno pensare all'attacco di un orso polare. Ma ci sono molte incongruenze in questa teoria: le porte dei bungalow in cui i tre abitavano non sono state scardinate; non ci sono impronte dell'animale sulla scena dei delitti, né altre tracce sui loro corpi. C'è un solo indizio, per quanto misterioso: in tutti e tre i bungalow sono stati trovati dei tupilak, piccole statuine d'orso del folklore inuit... L'indagine è appena cominciata, e il capitano Adriensen si ritroverà ben presto al centro di un intrigo in cui s'intrecciano violenza, politica, ecologia e spiritismo. Cercando di non soccombere alla malia del bianco intenso di quel luogo diverso da tutti, cui è impossibile restare indifferenti.

Luka was not a believer. He had always been skeptical of those biblical stories, including the supposed Forbidden Fruit tempting them under The Tree of Knowledge. But what was this hold Eve now had over him? Was it that? Was this the original sin? Or was it simpler than that? Was "the forbidden fruit" really just her delightful body? If so, Luka thought that Eve should have had a good lawyer. She had been framed. There was nothing sinful about it, Luka would argue. She was simply a natural wonder. To be fair, Luka's Eve was not the average human female. She was amazing! Better yet, many of their friends were nearly as awesome. So it went in Flathead County, home of 314 named mountains. As Rusty had somehow managed to inscribe on the side of one of those peaks, "Montana. It's Not For Wimps!"

The growth and development witnessed today in modern science, engineering, and technology owes a heavy debt to the rare, refractory, and reactive metals group, of which niobium is a member. Extractive Metallurgy of Niobium presents a vivid account of the metal through its comprehensive discussions of properties and applications, resources and resource processing, chemical processing and compound preparation, metal extraction, and refining and consolidation. Typical flow sheets adopted in some leading niobium-producing countries for the beneficiation of various niobium sources are presented, and various chemical processes for producing pure forms of niobium intermediates such as chloride, fluoride, and oxide are discussed. The book also explains how to liberate the metal from its intermediates and describes the physico-chemical principles involved. It is an excellent reference for chemical metallurgists, hydrometallurgists, extraction and process metallurgists, and minerals processors. It is also valuable to a wide variety of scientists, engineers, technologists, and students interested in the topic.

Albania provides a small amount of social assistance to nearly 20% of its population through a system which allows a degree of community discretion in determining distribution. This study investigates the poverty targeting of this program. It indicates that relative to other safety net programs in low income countries, social assistance in Albania is fairly well targeted to the poor.
