How to Be a Civil Servant Dec 25 2022 Although it is seldom recognised as such by the public, the civil service is a profession like any other. The UK civil service employs 400,000 people across the country, with over 20,000 students and graduates applying to enter every year through its fast-stream competition alone. Martin Stanley's seminal *How to Be a Civil Servant* was the first guidebook to the British civil service ever published. It remains the only comprehensive guide on how civil servants should effectively carry out their duties, hone their communication skills and respond to professional, ethical and technical issues relevant to the job. It addresses such questions as: How do you establish yourself with your minister as a trusted adviser? How should you feed the media so they don't feed on you? What's the best way to deal with potential conflicts of interest? This fully updated new edition provides the latest advice, and is a must-read for newly appointed civil servants and for those looking to enter the profession – not to mention students, academics, journalists, politicians and anyone with an interest in the inner workings of the British government.

STUDY OF THE RECRUITMENT OF LI Jan 14 2022 This dissertation, "A Study of the Recruitment of Liaison Officers II in the Home Affairs Department" by Wing-cheuk, Lau, ???, was obtained from The University of Hong Kong (Pokfulam, Hong Kong) and is being sold pursuant to Creative Commons: Attribution 3.0 Hong Kong License. Abstract: CHAPTER 1 INTRODUCTION Introduction In economics terms, civil service is basically a 'tertiary production' activity in which labour trained with or possessing the relevant skills is the most critical factor or input of production. Human resource is of utmost importance to the smooth operation of government. Hence, the acquisition of suitable people to fill the posts in the civil service is a very essential personnel function. The acquisition of the right people for the right jobs can be achieved by internal promotion or re-deployment of existing work force, and/or by appointing outsiders to the governments. In the civil service of Hong Kong, the posts at the basic rank are usually filled by people through recruitment from external labour market, whereas, posts at higher ranks are usually filled by internal promotion though direct recruitment from outsiders are not unusual. Source: 'The Hong Kong Civil Service' in the Internet Home Page of the Civil Service Branch, Hong Kong Government (Location: http://www.hku.hk/hkgcsb/eng_ver/4.htm, updated on 25 March 96) This dissertation, in a word, is a research of getting and keeping good employees in public organization using the Home Affairs Department (HAD) as the case of study. The theme of this study is to examine the recruitment and retention of suitable new recruits of Liaison Officers II (LOII) in HAD with reference to the relevant academic theories, including those of human resource management (HRM). The macro and micro factors influencing recruitment and retention, the problems and their likely causes in the recruitment, selection and retention of LOsII in the department will be explored; and recommendations to address the problems will be made. In this dissertation, I shall argue that not until recently has the HAD management adopted an integrated approach in the context of HRM in attempt to resolve the problems of recruitment and retention of LOsII. With the support of evidence from statistical analysis, I shall further argue that in the process of selection of LOsII, the selection tools used by the department are unreliable and assessments made are inconsistent As it will be elaborated in Chapter 2, factors in the environmental, organizational and personal dimensions are linking to the recruitment and retention of employees. Aided by the views of the HAD management (from both the line and personnel

managers); as well as various statistical analysis on the correlation between the recruitment response rate/wastage rate and the factors in the three dimensions mentioned above, I shall also argue that: (a) the unfavourable working conditions, low job esteem and unattractive remuneration are the main causes of high turnover rates of LOsII; (b) the LOII post is less attractive to people of higher qualifications, especially to those graduates from the two local 'brandname' universities (i.e. Hong Kong University and Chinese University); nor is it attractive to those who could have scored higher grading in Government's general written examination for purpose of recruitment of matriculation grade employees. (c) most personal factors of the new recruits of LOII, including their sex, age, qualifications, institute graduated from, and their performance in the selection tests, etc. do not display prominent influence at the initial stages of the recruitment process, but they do at those stages following the selection interview. Probabilistic Machine Learning for Civil Engineers Jan 02 2021 An introduction to key concepts and techniques in probabilistic machine learning for civil engineering students and professionals; with many step-by-step examples, illustrations, and exercises. This book introduces probabilistic machine learning concepts to civil engineering students and professionals, presenting key approaches and techniques in a way that is accessible to readers without a specialized background in statistics or computer science. It presents different methods clearly and directly, through step-by-step examples, illustrations, and exercises. Having mastered the material, readers will be able to understand the more advanced machine learning literature from which this book draws. The book presents key approaches in the three subfields of probabilistic machine learning: supervised learning, unsupervised learning, and reinforcement learning. It first covers the background knowledge required to understand machine learning, including linear algebra and probability theory. It goes on to present Bayesian estimation, which is behind the formulation of both supervised and unsupervised learning methods, and Markov chain Monte Carlo methods, which enable Bayesian estimation in certain complex cases. The book

then covers approaches associated with supervised learning, including regression methods and classification methods, and notions associated with unsupervised learning, including clustering, dimensionality reduction, Bayesian networks, state-space models, and model calibration. Finally, the book introduces fundamental concepts of rational decisions in uncertain contexts and rational decision-making in uncertain and sequential contexts. Building on this, the book describes the basics of reinforcement learning, whereby a virtual agent learns how to make optimal decisions through trial and error while interacting with its environment.

Soil Erosion Nov 19 2019 A thorough look at physical properties of soil erosion Soil erosion has been responsible for billions of dollars of damage during the past thirty years, in the United States alone. Soil Erosion provides complete coverage of the physical causes, processes, and effects of this environmental problem from its origins to planning for future conservation and remediation. This book focuses on the process of soil erosion and erosion-control principles independent of land use. Coverage includes the primary factors that influence soil erosion, various types of erosion, erosion-prediction technology, erosion measurements, erosion and sediment control, and conservation of the land. Practical material on erosion models is featured along with ways to use these models as erosion-control tools. Details of conservation planning and government policy are presented in a historical context, supported by examples of working public programs and technical tools for conservation planning. End-of-chapter summaries and comprehensive appendices on soils, hydrology, and soil-erosion Web sites make this a complete and easy-to-use introduction to soil-erosion processes, prediction, measurement, and control. Supplemented with more than 100 photographs, drawings, and tables, *Soil Erosion: Processes, Prediction, Measurement, and Control* is an essential book for students of soil management, erosion, conservation, earth science, civil engineering, and agriculture; employees of soil conservation districts; government employees in the Natural Resources Conservation Service, Forest Service, USDA, EPA, and Bureau of Land Management; and soil scientists.

Encyclopedia of American Civil Liberties Oct 19 2019 This Encyclopedia on American history and law is the first devoted to examining the issues of civil liberties and their relevance to major current events while providing a historical context and a philosophical discussion of the evolution of civil liberties. Coverage includes the traditional civil liberties: freedom of speech, press, religion, assembly, and petition. In addition, it also covers concerns such as privacy, the rights of the accused, and national security. Alphabetically organized for ease of access, the articles range in length from 250 words for a brief biography to 5,000 words for in-depth analyses. Entries are organized around the following themes: organizations and government bodies legislation and legislative action, statutes, and acts historical overviews biographies cases themes, issues, concepts, and events. The Encyclopedia of American Civil Liberties is an essential reference for students and researchers as well as for the general reader to help better understand the world we live in today.

The Green Book Sep 22 2022 This new edition incorporates revised guidance from H.M Treasury which is designed to promote efficient policy development and resource allocation across government through the use of a thorough, long-term and analytically robust approach to the appraisal and evaluation of public service projects before significant funds are committed. It is the first edition to have been aided by a consultation process in order to ensure the guidance is clearer and more closely tailored to suit the needs of users.

Civil Litigation Mar 16 2022 Civil Litigation is a comprehensive text designed to familiarize the paralegal student with all aspects of the civil litigation process and the role of the paralegal in that process. It provides substantive legal principles and their practical applications in a realistic litigation practice. The book presents a chronological approach to litigation, starting with the opening stages of a lawsuit, progressing to the preparing of pleadings and motions, followed by discovery and concluding with pre-trial, trial and appellate proceedings. Litigation technology and relevant Internet sources are

incorporated into each chapter. Projects and exercises at the end of each chapter also give the student opportunities to prepare litigation documents such as letter, pleadings, motion and discovery. Students not only read about the litigation process, but benefit from the practical experiential assignments.

The Encyclopedia of Civil Liberties in America Feb 21 2020 Driven by the growing reality of international terrorism, the threats to civil liberties and individual rights in America are greater today than at any time since the McCarthy era in the 1950s. At this critical time when individual freedoms are being weighed against the need for increased security, this exhaustive three-volume set provides the most detailed coverage of contemporary and historical issues relating to basic rights covered in the United States Constitution. The Encyclopedia of Civil Liberties in America examines the history and hotly contested debates surrounding the concept and practice of civil liberties. It provides detailed history of court cases, events, Constitutional amendments and rights, personalities, and themes that have had an impact on our freedoms in America. The Encyclopedia appraises the state of civil liberties in America today, and examines growing concerns over the limiting of personal freedoms for the common good. Complete with selected relevant documents and a chronology of civil liberties developments, and arranged in A-Z format with multiple indexes for quick reference, The Encyclopedia of Civil Liberties in America includes in-depth coverage of: freedom of speech, religion, press, and assembly, as outlined in the first amendment; protection against unreasonable search and seizure, as outlined in the fourth amendment; criminal due process rights, as outlined in the fifth, sixth, seventh, and eighth amendments; property rights, economic liberties, and other rights found within the text of the United States Constitution; Supreme Court justices, presidents, and other personalities, focusing specifically on their contributions to or effect on civil liberties; concepts, themes, and events related to civil liberties, both practical and theoretical; court cases and their impact on civil liberties.

Earthquake Disaster Simulation of Civil Infrastructures Jun 26 2020 Based on more than 12 years of systematic investigation on earthquake disaster simulation of civil infrastructures, this book covers the major research outcomes including a number of novel computational models, high performance computing methods and realistic visualization techniques for tall buildings and urban areas, with particular emphasize on collapse prevention and mitigation in extreme earthquakes, earthquake loss evaluation and seismic resilience. Typical engineering applications to several tallest buildings in the world (e.g., the 632 m tall Shanghai Tower and the 528 m tall Z15 Tower) and selected large cities in China (the Beijing Central Business District, Xi'an City, Taiyuan City and Tangshan City) are also introduced to demonstrate the advantages of the proposed computational models and techniques. The high-fidelity computational model developed in this book has proven to be the only feasible option to date for earthquake-induced collapse simulation of supertall buildings that are higher than 500 m. More importantly, the proposed collapse simulation technique has already been successfully used in the design of some real-world supertall buildings, with significant savings of tens of thousands of tons of concrete and steel, whilst achieving a better seismic performance and safety. The proposed novel solution for earthquake disaster simulation of urban areas using nonlinear multiple degree-of-freedom (MDOF) model and time-history analysis delivers several unique advantages: (1) true representation of the characteristic features of individual buildings and ground motions; (2) realistic visualization of earthquake scenarios, particularly dynamic shaking of buildings during earthquakes; (3) detailed prediction of seismic response and losses on each story of every building at any time period. The proposed earthquake disaster simulation technique has been successfully implemented in the seismic performance assessments and earthquake loss predictions of several central cities in China. The outcomes of the simulation as well as the feedback from the end users are encouraging, particularly for the government officials and/or administration department personnel with limited professional knowledge of earthquake engineering. The book offers readers a systematic solution to earthquake disaster simulation of civil infrastructures. The application outcomes demonstrate a promising future of the proposed advanced techniques. The book provides a long-awaited guide for academics and graduate students involving in earthquake engineering research and teaching activities. It can also be

used by structural engineers for seismic design of supertall buildings.

Civil Society in Central Asia Apr 17 2022 What form will the Central Asian societies of Kazakhstan, Uzbekistan, Turkmenistan, Tajikistan and Kyrgyzstan take in the 21st century? This book examines important recent developments in the region as they represent tendencies toward - or away from - pluralism and democracy.

The 'Russian' Civil Wars, 1916-1926 Oct 31 2020 This volume offers a comprehensive and original analysis and reconceptualisation of the compendium of struggles that wracked the collapsing Tsarist empire and the emergent USSR, profoundly affecting the history of the twentieth century. Indeed, the reverberations of those decade-long wars echo to the present day - not despite, but because of the collapse of the Soviet Union, which re-opened many old wounds, from the Baltic to the Caucasus. Contemporary memorialising and 'de-memorialising' of these wars, therefore form part of the book's focus, but at its heart lie the struggles between various Russian political and military forces which sought to inherit and preserve, or even expand, the territory of the tsars, overlain with examinations of the attempts of many non-Russian national and religious groups to divide the former empire. The reasons why some of the latter were successful (Poland and Finland, for example), while others (Ukraine, Georgia and the Muslim Basmachi) were not, are as much the author's concern as are explanations as to why the chief victors of the 'Russian' Civil Wars were the Bolsheviks. Tellingly, the work begins and ends with battles in Central Asia - a theatre of the 'Russian' Civil Wars that was closer to Mumbai than it was to Moscow.

Civil Servant 2.0 Nov 12 2021 "In this book Dutch civil servant Davied van Berlo explains the significance of web 2.0 for government in terms of its internal organisation, its relationship with the public, and the working methods of the civil servant. The second part, Civil Servant 2.0 beta, provides a practical interpretation of the concepts expressed in the first part, and contains action points and ideas for government organisations to develop their own strategies for government 2.0." - back cover.

Civil Society and the Internet in Japan Sep 10 2021 Using case studies, interviews, and empirical sources, this book analyzes the strategies and impact of Internet use by civil society actors and asks how useful it is for their work – does the availability of Internet tools change the way citizens' groups work, does it influence their effectiveness, and does it do so differently in Japan from other countries? Four fascinating studies take a closer look at the role of the Internet during the history textbook controversy; strategies of small citizen's groups; comparisons between internet use in Japan, Korea and Germany; and how the internet is used as a platform to discuss the dispatch of Japanese troops in Iraq. Isa Duche has produced an original work that will be of interest to students and scholars of Japanese politics, media and information technology and civil society.

Civil Disobedience from Nepal to Norway Jul 08 2021 This volume explores the shifts in how civil disobedience has come to be theorized, defined, understood, and practised in contemporary politics. As social activism takes increasingly global forms, the goals of individuals and groups who view themselves as disobedient activists today can be defined in broader cultural terms than before, and their relationship to law and violence can be ambiguous. Civil disobedience may no longer be entirely nonviolent, its purposes no longer necessarily serve progressive or emancipatory agendas. Its manifestations often blur the lines established in "classic", philosophically justified, and self-regulatory forms as epitomised in mass nonviolent protests of Mahatma Gandhi and Martin Luther King and theories of Arendt, Rawls and Dworkin. How civil disobedience operates has changed over the years, and this volume unpacks its many contemporary lives. It discusses new theoretical and political dilemmas and paradoxes through empirical cases and practical examples from Europe, the United States, and South Asia, which enables a "mirroring" perspective for the challenges and complexities of civil disobedience in different parts of the world. Bringing together innovative and introspective perspectives on people and protests in contemporary political contexts, this volume will be of great interest to scholars and philosophers of political science, international relations theory, political philosophy, peace and conflict studies, sociology, and cultural studies.

Civil Liability for Bunker Oil Pollution Damage Dec 01 2020 This book deals with the liability conventions brought into existence by the International Maritime Organization and concentrates on the newly adopted instrument dealing with bunker oil pollution as an area of great concern for every stakeholder involved in shipping business. The work covers a wide spectrum ranging from the Convention itself to its scope of application, liable and aggrieved parties, jurisdiction, requirements of liability and admissibility of claims, defences and exoneration from liability. It addresses many areas of interest and of importance to international and national legal advisors, lawyers, law students and anyone interested in the relevant field such as shipowners, charterers, shipbrokers, ship personnel and associated contractors and sub-contractors.

North Korean Civil-military Trends Mar 24 2020 Civil-military relations is one of the most challenging dimensions to deal with regarding North Korea. Since 1998, Pyongyang's foremost policy has been declared as "military-first." While experts debate the precise meaning and significance of this policy, considerable consensus exists that it gives the leading role to the Korean People's Army (KPA). Hence, military leaders in the Democratic People's Republic of Korea are very powerful and influential figures. Who are they? What kind of power and influence do these leaders wield, and how do they exert it? How do KPA leaders interact with dictator Kim Jong Il and their civilian counterparts? Mr. Ken Gause sets out to answer these questions in this monograph.

FRP Composites in Civil Engineering Mar 04 2021 This Proceedings contains the papers presented at the International Conference on FRP Composites in Civil Engineering, held in Hong Kong, China, on 12-15 December 2001. The papers, contributed from 24 countries, cover a wide spectrum of topics and demonstrate the recent advances in the application of FRP (Fibre-reinforced polymer) composites in civil engineering, while pointing to future directions of research in this exciting area.

Non-Destructive Testing in Civil Engineering 2000 Sep 29 2020 The first international symposium on NDT-CE (Non-Destructive Testing in Civil Engineering) was held in Berlin, Germany in 1991. Successive symposia were held throughout Europe until 1997. This, the 5th symposium is organized as SEIKEN SYMPOSIUM No. 26, and is sponsored by the Institute of Industrial Science, at the University of Tokyo, Japan. Original objectives of the NDT-CE symposium have been to provide an opportunity for discussing current issues and future perspectives of NDT and for promoting mutual understanding among engineers and researchers. Asia is one of the key regions for further development in NDT and this symposium in Japan will be a good opportunity not only to exchange technical information on NDT, but to promote worldwide friendship between engineers in Asian countries and other nations of the world. This volume contains 70 papers providing the most recent research results and findings. The papers are grouped under the following areas: (1) keynote papers, (2) magnetic / electric, (3) steel structures, (4) integrated test, (5) moisture, (6) strength, (7) acoustic emission, (8) various tests, (9) ultrasonic, (10) impact echo, (11) radar, (12) quality and (13) corrosion / cover.

The Official History of the British Civil Service Jan 22 2020 This first volume of the Official History of the UK Civil Service covers its evolution from the Northcote-Trevelyan Report of 1854 to the first years of Mrs Thatcher's government in 1981. Despite current concerns with good governance and policy delivery, little serious attention has been paid to the institution vital to both: the Civil Service. This Official History is designed to remedy this by placing present problems in historical context and by providing a helpful structure in which others, and particularly former officials, may contribute to the debate. Starting with the seminal 1854 Northcote-Trevelyan Report, it covers the 'lost opportunity' of the 1940s when the Service failed to adapt the needs of 'big government' as advocated by Beveridge and Keynes. It then examines, in greater detail, the belated attempts at modernisation in the 1960s, the Service's vilification in the 1970s and the final destruction of the 'old order' during the first years of Mrs Thatcher's government. Particular light is shed on the origins of such current concerns as the role of special advisers the need for a Prime Minister's Department the evolution of Parliamentary Select Committees to resolve the potential tension between bureaucracy and Parliamentary democracy. This Official History is based on extensive research into both recently released and unreleased papers as well as interviews with leading participants. It has important lessons to offer all those, both inside and outside the UK, seeking to improve the quality of democratic government. This book will be of great interest to all students of British history, British government and politics, and of public administration in general.
